company profile

PRATIKEL panel radiators are manufactured from 1.15 mm thick high quality cold rolled steel of Erdemir, in 5 different heights (300, 400, 500, 600, 900 mm) and in 20 different lengths from 400 mm to 3000 mm. Each panel radiator is manufactured complying the quality standard of DIN EN 442. Having the special decorative design and wide convector surface area, our radiators provide high heating efficiency.

By 33 mm pitch water channel conduits and wide convector surface, obtains maximum thermal efficiency.

Wall connection tools; "L" console, air vent plug, end plug, assembly (trifon) screw, screw holder, console holder clip are all included in the standard radiator packages for easy installation

Painting is the most important process in radiator production, needs of well cleaning beforehand. Degreasing by immersion, degreasing by spray, ironphosphate coating and passivation are the pre-painting processes. Then, wet undercoating painting and electrostatic powder painting follows, and finished by well drying. All are done under high standards with a quality finish in our factory.

Elegant and Stylish PRATIKEL radiators are designed with an elegant appearance and smooth surface and edges. It provides well decoration of the rooms.

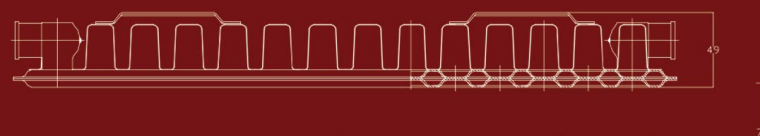

Each manufactured radiator by PLC control automatic lines, is tested under 13 bars of pressure and quality assured against and leakage issues before packaging.

Safety Packaging packed with bubble nylon packages supported by edge cardboards to ensure protection from outer effects during transport and carriage.
